Abstract

This paper converses the importance of issuing a using existing policy to as an enticement to small telecom network operatives in low regions, the latter is charity as a test case. This uses qualitative research methodology in order that the primary data would enable us for the later conclusions. Every state wants to realize Collective Access of telecommunication services due to its position to the economy and national life. Regrettably in rural world telecommunication services are moreover scarce or non-existent in rural areas. Conversely, previous telecommunication policies have enabled the facility of various network technologies in backward regions. What type of procedure is needed to push this telecommunication facilities into rural areas?
