ABSTRACT

With the rapid improvement in information technology a lot of firms are covering their manual information system in to computerized and automated information system. This has become possible only through the rapid improvement in information technology In this background the researcher choose hospital information system with special Reference to GV hospital in batticaloa district. it was manual system with a lot of Inefficiency

On the analysis phase the researcher discovered a lot of inefficient they are

- ✓ All updating modification of data has to be done manually that consume more time

- ✓ System is depend on one person

And researcher developed a new hospital information system that gives solution for the entire problem stated above. And also researcher believes that the new hospital information system can accommodate the future expansion of the organization.
