Abstract

The project that be develop is about School Student Information Management System that use in Bt/Oddamavadi Fatima Balika M.V.the project will be known as the School Student Information Management System (SSIMS) There are Six major modules included in theSSIMS, that are the Home Page Module, LoginModule, Main form Module, Update and Delete Module, ProgressReport module and Report Generation Module. This report contains the introduction, Literature Review and methodology, analysis and design of the project that is going to be developed the project methodology that is going to be used is the Database Life Cycle (DBLC) and Software Development Life Cycle (SDLC). Problems of the current system of the SchoolStudent Information Management System had been analyzed and requirement analysis had been made. SSIMS is going to be Window Base and going to be used by different groups of users. As user group, Record Officer and Class Room teacher to develop the real system, designs had been made that covers the system architecture, user interfaces and database designs. This system is hoped to help the FathimaBalika M.V inHandling the Student Information Management.
