ABSTRACT

School Management System in Higher Education Institutes needs systematic database management system. Information involved in higher education intuitions are about Teachers, students, Library, Nonacademic Staff etc. This project is about to develop the Management system that can be applied in higher education institutes. The objectives are to identify the problems involved in the implementation of the current information system at the higher education institutes.

The School Administration needs a systematic system to easily manage to the Members information and the School Library also needs a systematic system to easily manage to the Books information. So this system will give the big solution for these two problems.

Therefore this project including the programming of main function focuses on the user interface development the implementation for that I have used MSSQL Server 2008 for Database Development and visual C# used for the programming part.

This documentation has six chapters each and every chapter is explaining about the System, go through this documentation and enjoy yourself.
