ABSTRACT

This report describes implementation of education information System We have created the database design using SQL and populated with some sample data. The system can keep track of School id, Teachers, Schools, School location, Student id, Teacher id and the relationships between them. Education Information System application is to help ZDE to manage office in a systematic ways. The system is needed to be updated frequently to make the management of the authorization become easy. Before this, Zonal Education Office uses the manual system to manage the Education Information System. By this some problems have occurred such as human-errors in recording and calculating which lead to the lateness of the rest activities. Therefore, the computerized system that will be developed is for solving the problems that occurs or might occur and also to make the entire daily activities in office work smoothly and increase the productivity of the office.
