ABSTRACT

This project started for an academic final year project. I wanted to do a project with the duration of one semester (nearly 13 weeks) Hospital Management System Project report deals with all kind of patient details. Then I searched on the web to identify a suitable project. And also I asked various industry people and some seniors for this project. Finally I found this particular title to solve.

I have come across several problems when I did this project. I discuss the requirements, implementations, designing, testing and problems and solutions in this report.

Personally I'm interested in dealing with Net Beans. At first, I selected the project with the aim of developing Hospital Management System. But later I found that some Hospital Management System already have the facility. Therefore I changed my problem identification into desktop application. Now it's a tool for linking NetBeansfrom Oracle.
