ABSTRACT

The Country Fruit Style Company is the most useful and very busy place Kadawatha. They handle number of Product details. Some department faces many difficulties when handling materials of vast number of product manually. Therefore with this project I endeavor to improve the product details and maintain the quality and efficiency of the processes done by the company. Also proposed windows based solution for product and important parties to access the product records.

The entire system divides in to several sub systems which are namely Add New user System, Record keeping about fruit details, Handle about Ingredients details, Handle Sales Receipts Details and Reports Generation. This project covers the whole functionality of the one department of the company with providing better access control mechanism.

I hope build better system that company. Through achieving functional and nonfunctional requirements of the project, this system will give a smooth functioning procedure with user friendly environment. Hence I believe that the project work will engage a better and efficient working environment in that company.
